NEW DEVELOPMENTS

Research and Development Department
for **new ideas**

Research and development (R&D) is a valuable tool for growing and improving your business. The primary function of a R&D group is to develop new products discovering new raw materials, their interaction, and different pharmaceutical forms.

 discovering of new raw materials and associations

 different types of realese

1. slow realese
2. fast realese
3. double realese

New types of matrix as carriers for active ingredients
in food supplements

chocolate comfits

Consumers are constantly trying to boost their nutritional intake of molecules (vitamins and others) through the use of food supplements. Today manufacturers are seeking ever more appealing ways of delivering efficient doses of what is good. Fatty acids of cocoa can be used as carrier for active food supplements. Stability studies carried out on different formulations have shown that active values remain stable over time.

pharmaceutical form suitable for pediatric administration.

different therapeutic areas developed:

- | | |
|------------------------------------|------------------|
| 1. antioxidants | 5. energizing |
| 2. sleep and relax | 6. immune system |
| 3. concentration and mental health | 7. pregnancy. |
| 4. multivitamins | |
